Rakan Eyad

AI & Full-Stack Engineer
rakan132546@gmail.com · github.com/STERBAN0 · linkedin.com/in/rakan-abdulla

Summary

Mechatronic engineering graduate (Honours, University of Sydney) who builds end-to-end and ships solo: Tradie Texts, a production missed-call recovery SaaS for trades businesses (LLM conversation engine, telephony, billing), now piloting with first users; an open-source real-time computer-vision engine and SDK; and an Honours thesis training RL agents in NVIDIA Isaac Sim. Works AI-natively: repos ship with CLAUDE.md context files, CI, and deterministic tests. Completed Anthropic's AI Fluency and Claude 101 courses.

Experience

System Engineer — ALBON Nov 2024 — Jan 2026
- Developed and integrated hardware, software, and mechanical components for a prototype control system: migrated the architecture from a microcontroller to a Raspberry Pi for real-time data processing, integrated sensor arrays, and engineered the system's electrical junction box to cut power consumption and keep the hardware reliable.

Engineering Intern — Escape The Room Sep 2021 — Nov 2021
- Designed mechanical puzzles and implemented engineering concepts in real-world, client-facing products.

Testing Technician Intern — CloudAk May 2021 — Aug 2021
- Supported server system testing and maintenance in data-centre environments.

Featured Projects

Tradie Texts — Micro-SaaS · in production
- Built a production micro-SaaS that recovers missed calls for trades businesses using Twilio telephony and a GPT-4o-mini SMS conversation engine.
- Built multi-tenant infrastructure end-to-end: Next.js 15 + TypeScript, Supabase Postgres with row-level security, Redis-backed idempotency/rate limiting, and Stripe usage-based billing.
- Hardened the system solo with 276 CI tests, Playwright e2e coverage, a threat model, and incident runbooks.

Conjure — Open source · Python
- Built a real-time computer-vision engine classifying 9 hand/face gestures via MediaPipe landmarks, rendering effects at 60 FPS with unit tests and CI.
- Profiled and optimized the render pipeline from 162 ms to 2.8 ms per frame (58x speed-up) through allocation discipline.

FUN.D — Full-stack web app
- Built a full-stack crowdfunding platform: a Flask REST API (JWT auth, role-based admin) and a React 19 + Vite frontend.
- Implemented an idempotent Stripe Elements payment flow end-to-end and resolved N+1 queries, upload validation, and CI across both stacks.

Planetary Rover RL Navigation — Thesis · Isaac Sim
- Developed an Honours thesis (78/100, Distinction) on autonomous rover navigation: an A* global planner coupled to a PPO local policy, trained in NVIDIA Isaac Sim with 64 parallel rovers on Martian terrain.
- Hybrid achieved 99.5% success at 10 m (vs 79.5% standalone-PPO) and 90% vs 2% at 50 m; built the A* command term, terrain importer, reward tuning, and a custom evaluation pipeline.

Skills

AI & computer vision: RL (PPO), skrl · PyTorch, Computer vision · MediaPipe, LLM integration (OpenAI), Evaluation pipelines, AI-native / agentic workflows

Software engineering: Python / TS, React · Next.js · Flask, Postgres · Supabase · Redis, Stripe · Twilio integration, pytest · Vitest · Playwright · CI, git · GitHub · profiling

Working style: Test-driven & methodical, Documents thoroughly, Led teams to delivery, Client-facing comms, Self-taught: ROS2, FPGA, Isaac, Adaptable across the stack

Education

B.E. (Honours), Mechatronic Engineering
University of Sydney · 2022 — 2026
EWAM (Engineering Weighted Average Mark) 76% — Distinction
